

Powering Healthcare Solutions Catalogue

Powering Healthcare Solutions Catalogue

The vast majority of healthcare facilities in low income countries – in particular in Sub-Saharan Africa and South Asia – do not have access to reliable electricity. Yet, they are expected to be at the frontline of fighting the COVID-19 pandemic.

The past five years have witnessed an ever-increasing range of technical solutions to tackle energy challenges in a more effective and efficient way. Nevertheless, most energy and healthcare providers are not aware of these opportunities.

Responding to the urgency of the COVID-19 crisis and meeting SDG7 and SDG3 require timely and strong collaboration between the energy and health sectors, drawing on their respective strengths and expertise.

This catalogue serves the purpose of connecting stakeholders from the energy and health sectors with solutions providers, to help meet the energy needs of healthcare facilities in response to COVID-19 and beyond. The solutions provided herein represent a sample of a larger group of solution providers who can contribute to addressing this challenge.

Sustainable Energy for All (SEforALL) and the World Bank/ESMAP do not promote any particular solution provider or technology and are not responsible for the quality and accuracy of the information contained in this catalogue.

Solution Description

ABM Global Energy is a leading British company in the off-grid products and solutions sector. We offer different applications in the off-grid space both for solar PV power and storage. Currently, we have developed a solar & storage containerised solution ideal for remote and isolated areas. This "mini solar PV farm (with storage) in a container" is a perfect replacement of diesel gensets.

Solution Description

The Aldelano Solar PowerPak/Generator™ is a solar power converting station that collects solar energy and converts it to usable AC power for use with virtually any electric device. These solar generators can power everything from a small home to an entire village. All units are customized to meet the electrical needs of the region and the specific needs of the customer. Models include single phase and 3 phase from 12 to 84 kWh/kVa providing from 69 to 384 kWh of daily energy output.

Solution Description

BoxPower's modular microgrid systems can deliver renewable and reliable power as a cost-effective alternative to diesel generators. By pre-assembling and mass-producing our systems in shipping containers, BoxPower products help communities, governments, businesses, humanitarian and emergency relief agencies access off-grid power rapidly and provide energy resilience when power supply from the grid is unavailable or unreliable. BoxPower's product range is scalable and can be configured to meet a broad range of use cases and applications. We're proud to help to deliver clean, affordable, reliable energy to established and emerging markets around the world.

The d.light solar healthcare bundle comprises X2000 SHS (lighting, device charging, radio, power refrigerator and testing equipment), M100 Smartphone (EMR app, communications) and DCR50 Refrigerator (vaccine storage, test samples) to provide care for the infected (with upgraded healthcare infrastructure) as well as *prevent* further infections by disseminating timely communication and information to the local public and frontline workers.

This bundle offers the following services:

- All-night lighting for 5 rooms
- Medical supplies and vaccine refrigeration
- Multi-mobile charging
- Rechargeable radio for information access
- Internet-access for communication with health authorities
- EMR sharing, maternity care and COVID contact tracing
- Task light for focused operations

Solution Description

Differ is a value chain integrator providing turn-key energy service solutions for health facilities of any size (1-1000kWh). We integrate technology (generation, storage and appliances), supporting software and remote monitoring technology and service and maintenance (O&M) schemes to ensure sustainability for years. The technology package may also include solutions for purified water and hot water as well as medical devices – in addition to the “traditional” supply of reliable solar energy and basic appliances like lights, fridges, charging, air con etc. Hence, Differ is a one-stop-shop solution provider for electrification of health facilities. See also [video](#) from Malawi installations.

Solution Description

Dulas are the manufacturers of a wide range of WHO PQS approved refrigerators and freezers for vaccines and blood storage. Our SDD refrigerators work from solar panels without the need for batteries and use advanced PCM to maintain a constant vaccine storage temperature.

These 'Plug and Play' systems are designed for ease of use in challenging environments. They have Grade A freeze protection and will operate at a stable +2°C to +8°C.

With the optimal balance between solar array size and refrigerator autonomy, Dulas refrigerators are designed to deliver perfect vaccine storage conditions every day, every year, whatever the weather.

Solution Description

Microgrids are localized stand-alone power generating, distribution, and energy storage systems that can be operated independently or connected to the primary grid. They provide a reliable, efficient solution to unexpected power losses, effectively balancing variations in energy demand, optimizing energy usage for more reliable power, and reducing operating costs and carbon emissions

Using advanced software controls to optimize system operation, microgrids dynamically shift energy loads as needed to various local power sources, (i.e. solar PV, wind, battery storage, generators, or the utility grid) to maximize efficiency and reduce costs.

Solution Description

Solar eleQtra™ is an ideal power source for front line health clinics providing enough power for typical equipment including: lighting, IT equipment, medical refrigerator, sterilization equipment, suction machine and oxygen concentrator.

Each unit includes an inverter of 1,000 W ac continuous output, 200 amp-hour storage battery, automatic fuses, 4 standard ac plug outlets and 4 USB charging outlets all housed in a secure steel cabinet. The system comes with 4 x 160 Wp roof-mounted solar PV panels with low-profile mounting frames to minimize theft. Each Solar eleQtra™ unit delivers an average output of 3.1 kWh per day in a typical application.

Solution Description

EM-ONE is an engineering, technology, and consulting firm with over 10 years of experience working at the nexus of sustainable energy and social impact in West Africa. Our proprietary solar microgrid– the EM-BOX – is a containerized, modular, and scalable solution designed to address the urgent need to electrify healthcare centers across the continent. Over the past three years, it has been successfully deployed at nearly 300 primary health centers and rural hospitals in Nigeria. These facilities have seen a drastic improvement in their ability to provide life saving care to their community both during the global pandemic and beyond.

Solution Description

Recent years have seen a rapid growth in the adoption of app based digital tools on smart phones for health programs. Digital-health tools are reaching last mile communities with no access to electricity, and keeping phones charged is becoming a critical challenge. The Little Sun Charge (LSC) was specifically designed with a large solar panel and high capacity battery to power modern smart phones. CHW are consistently choosing the LSC for their work because of its high durability, portability, usability, and charge capacity. LSC has been powering COVID-19 digital health response in Ethiopia, Kenya, Senegal, Tanzania, Burkina-Faso, and Uganda.

Solution Description

Micergy MP2 is the most powerful Pay-As-You-Go Solar Home System designed for households and small businesses with unstable grid power supply, it can be fast charged by both solar and AC at the same time, the built-in cigarette lighter output allows end-users to power big DC appliances like fridge and freezer or small AC appliances (like AC TV, laptop etc., Max 120W) during power failure. Pay-As-You-Go technology was embedded to allow end-users to make payment by installment, rather than 100% upfront, thus making full use of every cent. Besides, we adopted advanced encryption technology to minimize the risk of illegal tamper and theft to reduce the default rate for PAYG operators. Micergy MP2 pay-as-you-go solar home system was tested according to the Quality Test Method stipulated in edition 4 of IEC 62257-9-5 and complied with the Lighting Global Solar Home System Kit Quality Standards

Solution Description

PowerGen offers commercial and industrial solar PV systems with lithium-ion storage that can be integrated with existing utility power supply to improve reliability or diesel backup generators in off-grid applications. The solar PV capacity range in size from 30kW to 1,000kW, storage capacity ranges from 34kWh to 1,032kWh and can be installed in parallel to meet higher demand. The battery energy storage solutions can be supplied in 10ft, 20ft or 40ft containers and come with heating, ventilation, air conditioning and fire suppression. The systems allow for remote monitoring, have little maintenance requirements, and come with a performance warranty of 10 years.

Solution Description

Resilient and reliable energy supply is essential to delivering both basic and modern healthcare services. From empowering general practitioners and clinical services to work after sundown, to powering laboratory equipment, incubators, intensive care units and the appropriate storage of vaccines, blood work and medications. To tackle these challenges in the face of Covid19 and beyond, Ryse Energy as has designed and developed plug and play, hybrid small-scale wind, solar PV and energy storage renewable energy solutions, for a truly off-grid healthcare solution, facilitating the connection of energy and healthcare, reducing healthcare poverty, and enabling global healthcare equality.

Solution Description

Rural healthcare facilities in East Africa typically have no water and so cannot maintain basic sanitation. Our solution provides year-round access to water and handwashing as well as electricity and lighting. The community will have well-lighted clinics and much better sanitation. They will have a source of water that is not contaminated, and a place where they and their medical service providers can wash hands and equipment, providing a much healthier environment for all healthcare services. **Options** include a SmartTAP water dispenser providing income for ongoing O&M, and/or UNOCOOL DC Refrigerator with a 200 W solar panel for vaccines.

Solution Description

This solution is the second phase healthcare response to COVID-19 in Malawi and Zambia in partnership with the respective Ministries of Health.

We are repurposing plug and play systems to power energy efficient, modern medical devices for rural health facilities – where the majority currently have no access to reliable, or any, electricity.

By incorporating the delivery of this program within our existing SunnyMoney distribution network, we will guarantee affordable Operation and Maintenance while testing revenue generation models to offset the already low cost.

Solution Description

An autonomous plug and play solar power supply specifically designed for off grid applications in Africa and in developing countries. It is a solar panel with a battery box containing battery and electronics installed on its back. It designed to be installed in open air (outdoor) in harsh environments (desert, tropical and maritime areas of the world). It is maintenance free with a 10 year lifespan. It is very modular, portable and robust. All components are integrated in a single water and dust tight, rust free aluminum box. Thanks to the modularity and fail safe features, the system is the ideal choice for remote health clinics, dispensaries, mobile COVID testing centers and for powering the related IT and telecom systems.

Solergie NV

SolergieBox

Solution Type

Component-based power system, with and without appliances

Tech Specs

Capacity: 100 Wp-10 kWp

Target Geographies

Sub-Saharan Africa

Lead Time (est.)

< 2 weeks (West Africa)

2-5 weeks

(East/Central/Southern Africa)

Partners

Solergie NV (Belgium) –

Solergie SARLU (Togo)

Current Needs

Grant funding

Equity

Partnerships

Solution Description

The SolergieBox, a smart solar nano-grid solution, provides clean, reliable and affordable power (220V), in order to guarantee a continuous availability of reliable electric power for the healthcare facility (HCF). We also provide the supply of basic equipment (medical refrigerator, lighting bulbs, fans and outlets to connect other electrical equipment). To maintain the solar system, we bet on the unique feature of the nano-grid: up to 8 customers can be connected to the SolergieBox, so, in addition to the HCF, additional customers and/or a local entrepreneur can be connected, who provide maintenance of the HCF through their payments.

Logistics assistance

Solution Description

The We Care Solar Suitcase is a compact, complete, safe, institutional-grade solar electric system for maternal health facilities. This user-friendly pre-wired system contains solar panels, a lithium-ferrous-phosphate battery, a customized charge controller, break-resistant 70,000 hours medical LED lights, 12VDC and 5VDC outlets, and all installation hardware. LED headlamps, phone charging, a fetal Doppler, infrared thermometer, and rechargeable batteries are included. 5,200 Solar Suitcases have been deployed in facilities where essential medical lighting and 12VDC power are needed, both as permanent and temporary (mobile) installations. Our programs, printed guides, and training videos build local capacity in solar installation, maintenance, and servicing.

Solution Description

A reliable, renewable, rapidly deployable and re-deployable fully powered mobile health clinic. The clinic can be quickly and easily installed in the heart of communities, both urban and rural, and provide prevention and healthcare services close to where people live and work. An integrated solution that increases access to electricity and healthcare, the Clinic utilises proven, reliable technology designed and tested for rugged, isolated environments to create critical healthcare infrastructure. The Clinic can be shipped and delivered by truck to the remotest regions and can be installed within days.

Solution Description

To power healthcare facilities with hybrid energy solutions optimized for medical equipment, build with highest (10 year) reliability standards. Ability to integrate with the grid, generator, other (AC/DC) power sources, and PV solar array. Sized to operate autonomously (off grid). Plug-and-play containerized solutions with 50kWh lithium battery capacity and 20kWp solar array.
